Bevel Edge Mirror

The "tough cutting" of oblique edge mirrors is different from that of traditional straight edge mirrors. The edges are finely polished to form an inclined slope, which forms a natural transition of light and shadow with the mirror surface. This technique not only eliminates the "sharpness" of the mirror edge, but also produces a soft halo through the refraction of the inclined surface when the light shines, as if setting a circle of "invisible light edges" on the mirror surface, instantly upgrading the overall texture.

Irregular Mirror

When the mirror breaks free from the constraints of the frame and exposes its true contours in an irregular posture, the frameless irregular mirror becomes the most free dancer of light and shadow in space. In a symmetrical space, it can create visual focal points in an asymmetrical posture; In crowded corners, it can broaden the visual dimension with transparency. Without the interference of unnecessary decorations, the reflective properties of the mirror itself are amplified, and the figures and objects reflected in it carry a sense of illusory beauty, making every gaze feel like a silent dialogue with space, finding a unique rhythm of life between freedom and order.

Aluminum Alloy Mirror

Aluminum alloy mirrors are framed with high-strength aluminum alloy and treated with processes such as anodizing, sandblasting, or wire drawing. The surface presents a variety of colors such as matte silver, champagne gold, and black, retaining the tough texture of metal while avoiding problems such as rust and deformation. They are both durable and aesthetically pleasing. Aluminum alloy mirrors, with their durability and versatility, can become both functional and decorative space partners, allowing every reflection to feel the rational beauty of metal and light and shadow interweaving.

PVC Art Mirror

PVC framed mirrors are practical decorative items that cleverly combine high-quality PVC material frames with mirror surfaces. Exquisite frames can also add a sense of hierarchy and design to the mirror surface, making the originally monotonous mirror surface instantly the finishing touch in the space. It has a lightweight texture and good moisture and corrosion resistance, which allows the mirror to maintain a clean and new appearance even when installed in damp and oily environments such as bathrooms and kitchens.

Easy to match with different decoration styles and usage scenarios, injecting more vitality and beauty into the space, meeting diverse aesthetic needs.

LED Smart Mirror

LED smart mirrors make daily photography more convenient and comfortable. The border is equipped with LED lights, which provide soft natural light. Details can be seen clearly during makeup and shaving, and brightness and color temperature can be adjusted by touch. It is not afraid of bathroom steam, comes with anti fog function, and the mirror remains clear even after a hot shower. Some styles can connect to WiFi, display time, weather, and even play music, and can be operated with just a wave of your hand, freeing up your hands. The ultra-thin design is versatile and suitable for various home styles, whether installed in the bathroom or bedroom. It is not only a practical dressing tool, but also a small helper to improve the convenience of life.

2025 New Makeup Mirror

When the beauty tool market was still using traditional border materials, we were the first to break through innovation – this acrylic border makeup mirror, as a new masterpiece in the beauty tool field by 2025, breaks industry norms with disruptive design and brings unprecedented user experience to those who pursue refinement. It is not only a mirror, but also the most anticipated "fresh force" in the beauty industry this year. Traditional makeup mirrors have long been plagued by the heaviness of metal frames and the fragility of glass frames. However, this product, which will be launched in 2025, introduces acrylic material into the frame design for the first time, using the latest "seamless injection molding" technology in the industry. The frame and mirror are seamlessly integrated, and the edges undergo 12 fine polishing processes, providing a smooth touch like baby skin. This process is the first application of its kind in similar products and is a unique quality label for new products.

Super Large Mirror

The application scenarios of large mirrors are very wide, and you can install them in gyms, yoga studios, Pilates facilities, wedding shops, etc. Mirrors covering the entire wall not only make the space appear more spacious and bright, but also enhance the effect when paired with lighting.

When exercising or practicing dance, yoga and other sports, you can clearly observe whether your movements are standard and posture is correct through a large mirror, adjust and correct them in a timely manner, improve the exercise effect, and also increase the fun of the exercise.

Iron Frame Mirror

Iron frame mirrors have the core advantage of being sturdy and durable, with a unique texture. After polishing, spraying and other processes, they can present various styles such as matte and glossy, with a simple yet steady industrial style. Whether paired with retro home environments or modern minimalist decoration, they can complement each other and add a tough temperament to the space.

The stability of the iron frame makes it suitable for various scenarios. It can be placed as a dressing mirror in the bedroom or hung as a decorative mirror in the living room or foyer, combining practicality and decoration.

Floor Mirror

The floor to ceiling design creates a natural connection between the mirror and the ground, making it visually more transparent and complete. It is not limited by the size of the wall like a wall mounted mirror, but can present a more stretched mirror shape, fully reflecting every detail from head to toe, especially suitable for matching furniture of different heights, making the spatial lines appear smoother. The bottom support part is often integrated into the overall design, either using a simple metal bracket or seamlessly integrated with the wooden frame, ensuring stability without appearing abrupt, and instead becoming an organic component of the overall shape.
